

Structure Survey Editor Training

The **Structure Survey Editor** software can be used to view and edit structure profiles which are in SC0 file format. SC0 files are predominantly used in the **ClearRoute™** software for checking clearances between structures and vehicles.

Benefits

As well as providing training in the use of **Structure Survey Editor software**, the course provides an understanding of SC0 files and how they are used in **ClearRoute™**. Understanding how SC0 files are used in practise, and why the information contained in them is important, enables delegates to make the best use of **Structure Survey Editor**. It also enables them to create accurate, useful information for gauging purposes.

Delegates also learn the most efficient ways of using the software, thereby avoiding wasted time back at their desks.

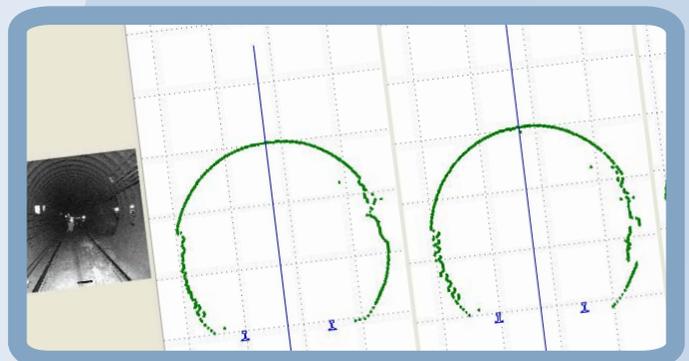

The course is made up of explanations and demonstration of **Structure Survey Editor** together with a series of practical exercises. So delegates have the opportunity to gain plenty of “hands on” experience of using the software.

Comprehensive course notes are provided to take away for future reference and delegates are also presented with a certificate to confirm their attendance and participation.

Course Outline

The course covers the following areas:

- ▶ Introduction to Structure Profiles (SC0 files)
- ▶ Using Structure Survey Editor
 - Loading Profiles
 - Editing Profiles
 - XY Coordinates
 - Mileage
 - Track Geometry
 - Saving Profiles

Structure Survey Editor Training (continued)

Training Details

The *Structure Survey Editor* courses can be attended in several ways.

We offer the course on-line; live with an instructor, providing delegates the advantage of professional training without the expense of travelling to our training centre. This course is run in the same interactive way as the classroom version of the course. As well as going through the software together, delegates have the opportunity to practise what they are learning using the *Structure Survey Editor* software remotely on lap-tops at our training centre. This is a great way of attending a course from anywhere with internet and telephone access.

We also run the course face-to-face in our Matlock training centre, in the beautiful Derbyshire Dales. Here delegates can benefit from being away from office distractions and enjoy our excellent training facilities. A buffet lunch is also provided.

Training courses can be arranged at a location to suit you. In these circumstances there will be an additional charge to cover the extra costs of off-site training.

Each course runs from approximately 9:30am to 2:30pm. The maximum recommended number of delegates is five. This ensures that there is a computer per delegate and each delegate receives maximum attention from the trainer.

Course Costs

The costs of courses held in Matlock or on-line are as follows:

(2016 price per delegate, excluding VAT)

1 delegate	£393
2 or more delegates	£268

Our training centre in Matlock, Derbyshire
